

Client story

Georgia Technology Authority

Enabling new and innovative services to citizens

Georgia Technology Authority provides technology leadership to the state of Georgia for sound IT enterprise management, helping enable state agencies and entities with technology services.

Business challenge:

- Provide technology leadership for 102 executive branch agencies and 1,300+ entities across Georgia

Solution:

- Unisys deployed a hybrid cloud environment with access to Amazon Web Services (AWS) and Microsoft Azure; other solutions include secure identity and access management to give state employees an identity-based single sign-on, storage (migration from tape to disc), backup, identity and directory management, data center management and mobile device management.

Results and benefits:

- Enhanced end-user experience via single sign-on
- Mitigated risk with faster data recovery (from weeks to hours)
- Lowered costs by moving to a consumption model
- Reduced average time for new infrastructure deployment dramatically from months to hours
- Enabled agencies to offer new and innovative services to citizens more rapidly
- Improved overall security posture of messaging services

“As the central IT authority for the State of Georgia, we’re committed to improving the overall quality and speed of our services to agencies and citizens. Unisys Cloud Management Solutions has brought greater flexibility, security and speed to market – at a much better price point.”

Sunil Aluri, former COO, Georgia Technology Authority, State of Georgia
