10 ways device subscription services deliver on public sector IT priorities

Drive digital transformation while reducing IT complexity

As digital innovation reshapes every industry, the public sector faces mounting pressure to evolve. Yet state and local governments must navigate distinct challenges when upgrading their technology infrastructure – challenges that set them apart from their private sector counterparts. The National Association of State Chief Information Officers (NASCIO) outlined 10 key priorities for government IT modernization.
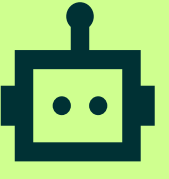

1 Cybersecurity and risk management
- Advanced endpoint protection
- Secure device configuration, decommissioning, data wiping
- Streamlined vendor management

2 Digital government and digital services
- Modern hardware solutions
- On-demand hardware options
- Identity management and privacy protection

3 Artificial intelligence and automation
- AI-driven predictive maintenance
- Automated device provisioning and support
- Integrated AI chatbots

4 Legacy modernization
- Modern application support
- Cost-effective hardware upgrades
- Smooth transitions from outdated systems

5 Workforce transformation
- Flexible device options for remote and hybrid work
- Scalable workforce solutions
- Strategic IT management focus

6 Data management and analytics
- Real-time telemetry data
- Predictive analytics
- Big data capabilities

7 Broadband and wireless connectivity
- Compatibility with latest connectivity standards
- Support for mobile workforce

8 Identity and access management
- Multi-factor authentication
- Granular access control
- Alignment with digital identity standards

9 Cloud services
- Seamless integration with cloud strategies
- Enhanced security for cloud-connected devices
- Scalable management by leveraging cloud

10 New CIO operating model
- Reduced device management overhead
- Strategic decision-making focus
- Enhanced cross-agency collaboration
