Unisys Partners With Appspace to Strengthen its Sustainable Workplace Solution

*Advanced solution enhances the employee experience and supports smart building operations
to improve efficiency and employee satisfaction*

BLUE BELL, Pa., Sept. 18, 2025 – [Unisys](#) (NYSE: UIS) has partnered with [Appspace](#), a platform for workplace communications and management, to enhance its [Sustainable Workplace](#) solution. This collaboration combines the managed services expertise from Unisys with workplace platform capabilities from Appspace to deliver seamless, intelligent space management across multiple office locations.

Together, Unisys and Appspace help organizations create workplaces employees want to use by offering user-centric resources, such as real-time workplace data, touchless interactions, self-service tools and improved navigation and communication. The real-time workplace data makes it easier for employees to find available desks, rooms and other resources. The solution is designed to elevate the employee experience, increase operational efficiency and reduce negative environmental impact.

“Organizations continue to prioritize the employee experience, recognizing it as a strategic differentiator and a driver of workplace satisfaction, productivity, retention and employer brand reputation,” said Patrycja Sobera, senior vice president and general manager, Digital Workplace

Solutions, Unisys. “The Unisys-Appspace partnership presents a significant opportunity to transform how employees engage with their workplace, fully supporting a seamless hybrid work environment and helping make the in-office employee experience a positive one.”

Unisys has a proven track record in digital workplace expertise and certified personnel managing workspace solutions globally. Through enterprise-grade digital displays and signage, web and mobile apps, and touch-screen kiosks, the solution is designed to empower employees to perform a variety of self-service tasks — such as booking and locating meeting rooms, reserving desks or parking, and receiving company-wide news updates — without IT or facilities assistance. The solution also enhances the experience of frontline workers, keeping them informed about required training and alerts for company-wide and local emergencies via signage and screens across the workplace.

Features of the Unisys Sustainable Workplace with Appspace include:

- **Integration of automated processes**, physical devices and data analytics to improve operational efficiency, enabling smart building technology to adapt automatically to employee occupancy and preferences.
- **Use of environmental sensors** and building controls to track workspace usage, adjust temperature settings, and reduce waste with minimal manual effort — lowering energy costs and prompting a safer, more productive workplace.
- **Proactive, 24/7 operational support for managed services**, including organizational change experts to ensure successful user adoption and training.

“By partnering with Unisys, we’re combining their expertise in managed services with our platform to deliver solutions that make work simpler and more connected,” said Paul Alley, vice president of Global Partnerships at Appspace. “Together, we’re helping organizations create

environments that support their teams, improve resource efficiency, and adapt in real time to how employees actually use their workplace.”
